

The logo consists of the letters 'RT' in a bold, white, sans-serif font, centered on a solid orange rectangular background.

# Inobiz Run Time

**Inobiz RT a simple yet fast and powerful conversion and transformation engine.**

A software vendor is more often in a situation where customers choose their own solution and mixing software that best fits their needs. Another common scenario is that there is a legacy of applications for managing parts of the business that aren't easy to replace. Common to all these cases is that a complementary product must be able to convert data between different applications.

If your company has an existing system and you only need a conversion engine, which transforms information to and from different formats, Inobiz RT is the component you need. Whether the case of XML, flat text files, EDIFACT, SQL databases or Excel is Inobiz RT right choice for software vendors who want to give their applications the most easily implemented conversion tool.

## Built-in conversion engine

---

More and more companies are discovering the advantage of having a conversion engine built into the systems it supplies. Besides the advantages of always having the tools available to successfully incorporating their system with the customer's existing heritage, the company can build a library of existing mappings that can be reused and make new products easier to install and maintain.

## Format conversion

---

Data conversions for Inobiz RT, called mappings, are created with Graphical Data Mapping tool—Inobiz DS. The development environment is presented in a visual overview and includes a powerful programming language. By dragging and dropping objects with the mouse, you can quickly make simple mappings in Inobiz DS. Even complex transformations can be realized.

As a starting point you can use:

- EDIFACT or X12-catalogs, XML or XSD-document
- Existing SQL-database, WSDL (Web Services)

## Inobiz RT formats support

---

- |            |                      |
|------------|----------------------|
| - XML      | - JSON               |
| - EDIFACT  | - SQL                |
| - ODETTE   | - Flat files         |
| - X12      | - CSV files          |
| - TRADACOM | - Microsoft™Excel    |
| - HL7      | - Large files (>2GB) |

## Easy to implement

---

The mappings you create for Inobiz RT are also compatible with our integration platform Inobiz IS. When your customers needs grow, you therefore have a safe and proven path for upgrading.

Inobiz RT can be integrated in your software in a variety of ways for example .EXE or DotNet DLL.

*Inobiz RT is a component in Inobiz IS, one of the most widely distributed integration platforms, available today in operation in over 500 companies and organizations.*
